

RMarkdown can process multiple programming languages beyond R and Python. The supported languages depend on knitr and Jupyter integration.

Commonly Supported Languages in RMarkdown

Here are the main languages that can be used in RMarkdown:

- R (`{r}`) - Default language
- Python (`{python}`) - Requires `{reticulate}` package
- SQL (`{sql}`) - Requires DBI and a database backend (e.g., RSQLite)
- Bash (`{bash}`) - Runs shell commands
- C++ (`{cpp}`) - Requires Rcpp
- JavaScript (`{js}`) - Runs JavaScript code
- Stan (`{stan}`) - Bayesian modeling via rstan
- Julia (`{julia}`) - Requires JuliaCall or IJulia
- Perl (`{perl}`) - Executes Perl scripts
- Ruby (`{ruby}`) - Runs Ruby code
- Go (`{go}`) - Requires gophernotes
- SAS (`{sas}`) - Requires SAS installed and configured
- Matlab (`{matlab}`) - Requires R.matlab
- Fortran (`{fortran}`) - Used for scientific computing
- Scala (`{scala}`) - Requires sparklyr
- Groovy (`{groovy}`) - Less common
- PHP (`{php}`) - Runs PHP scripts
- Haskell (`{haskell}`) - Requires ihaskell
- F# (`{fsharp}`) - Used via dotnet interactive
- Awk (`{awk}`) - Uses Awk for text processing
